Your Local Pest and Rodent Expert

Flea Treatment

CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

How To Prepare For The Service

BASEMENT

- ▶ Please make this area accessible for our technician to treat if applicable by moving small items from floor surfaces and if there are large items, boxes, etc. move them together so as much of the area can be serviced as possible.

LIVING ROOM, BEDROOMS, ETC

- ▶ Arrange to have your pet(s) professionally treated for fleas before the premises are treated.
- ▶ Vacuum all rugs, carpet, and upholstered furniture. Special attention must be given to pet resting areas. Vacuum bag should be discarded immediately upon completion.
- ▶ Mop all tile and vinyl floors; Sweep all floors that cannot be mopped.
- ▶ Remove and clean or dispose of all pet bedding.
- ▶ Make as much of the floor space accessible by removing all small items from floor surfaces. This includes the bottom of closets and under beds.

After The Treatment

The treatment will remain effective only if the following steps are taken after your home is serviced:

- ▶ Avoid waxing or washing floor surfaces, especially the edges for at least 3 weeks after treatment, and do not steam clean carpets.
 - Vacuum as usual every day for a week after treatment.
 - Expect to see adult fleas for up to 1 week after treatment.
- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near spray treatments, as this will decrease effectiveness.
- ▶ Because the treatment works best when fleas sense vibrations in the room try not to leave the home unoccupied for any extended periods of time (1 to 2 weeks).

Reminder

- ▶ When a spray is applied inside your residence, you and your pets may be required to vacate the premises. Typically, a 2-hour window is sufficient. However, your representative will advise you at the time of service or leave an information notice at your premises if additional time is required.
- ▶ Persons with underlying health conditions should consult their family physician if they are concerned about re-entry time.
- ▶ Fish aquariums may be left on-site. However, they should be covered, and air filters disconnected.
- ▶ Please be patient. The treatment will reduce activity to very low levels within approximately 2-4 weeks, leading to elimination.

What You Can Expect From The Treatment

Your Technician will use a variety of methods to control the pest depending on each unique situation. The majority of the treatment will focus on the

room's carpet, baseboards, and pet loafing areas. All treatments will be made with your safety in mind to ensure your health.
