

Cockroach Treatment

BAITING ONLY CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

How To Prepare For The Service

KITCHEN

- ▶ Please provide access to the back of pantries, cabinets and drawers by organizing the storage areas.
- ▶ Clean and clear off all your counter tops.
- ▶ Keep all food items covered or in sealed containers.
- ▶ Remove all items from under the sinks.
- ▶ Please remove any competing food sources / spills from the areas listed above.
- ▶ Ensure to keep all removed items within the kitchen area to prevent cockroaches from spreading to other locations.

BATHROOM

Please ensure access is provided to the back of the cabinets, vanity and the storage area under the sink.

BEDROOM CLOSETS

Provide access to the closets if experiencing cockroach issue or signs of activity. Clothes on hangers may be left in place.

FURNACE ROOMS

Make this area accessible for the technician to properly inspect and treat.

Allergen Notification

Some of the products we utilize for controlling cockroaches contain allergens such as peanut butter and shellfish. Please alert your Technician and/or Superintendent where concerns over allergens exist prior to the treatment.

After The Treatment

The bait will remain effective only if the following steps are taken after your home is serviced:

- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near bait, as this will decrease or eliminate the effectiveness of the treatments.
- ▶ Remove all competing food sources (this means keeping all foods in tightly sealed containers, cleaning up spills as they occur, removing trash on a regular basis, etc.)
- ▶ You may place back all kitchen items right after the bait treatment.

Reminder

IF ONLY BAIT IS USED:

It is not necessary for you or your pets to leave your home before, during or after the bait treatment. You may notice greater activity right after treatment for 1 to 2 days. This is due to the cockroaches coming out

of their harborage areas to feed on the bait. Please be patient, the bait will **REDUCE COCKROACH ACTIVITY** to very low levels within approximately 2-4 weeks leading to elimination.

What You Can Expect From The Treatment

Your Technician will use a variety of methods to control the pest depending on each unique situation. The majority of the treatment will focus around kitchen appliances & closet shelving units in areas where the infestation was detected. In the majority of cases, your Technician will be using a bait formulation that is

strategically placed at sites of cockroach activity. This is the safest and most effective and efficient means of cockroach control and normally require only one treatment.

All treatments will be made with your safety in mind to ensure your health.
