

JM Pest Solutions

Your Local Pest and Rodent Expert

Stored Product Pest Treatment

CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

How To Prepare For The Service

KITCHEN

- ▶ Empty out all upper and lower cupboards
- ▶ Empty all your drawers of cutlery, towels, etc
- ▶ Clean and clear off all your counter tops
- ▶ Remove all dishes, pots, pans, cans, boxes, food, etc
- ▶ Ensure to keep all removed items within the kitchen area, i.e.: on kitchen table
- ▶ All dried food products should be inspected for infestation. Infested foods should be disposed of or placed in a freezer for at least one week. Foods not infested should be placed in plastic containers with tight-fittings lids.
- ▶ Notify the Technician of any found infested dried food items and also pet food

After The Treatment

Place shelf paper on all shelves before replacing cupboard contents.

- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near treatment

area, as this will decrease or eliminate the effectiveness.

- ▶ Keeping all foods in tightly sealed containers, cleaning up spills as they occur, removing trash on a regular basis, etc.

Reminder

- ▶ When a spray is applied inside your residence, you and your pets may be required to vacate the premises. Typically, a 2-hour window is sufficient. However, your representative will advise you at the time of service or leave an information notice at your premises if additional time is required.
- ▶ Persons with underlying health conditions should consult their family physician if they are concerned about re-entry time.
- ▶ Fish aquariums may be left on-site. However, they should be covered, and air filters disconnected.
- ▶ Please be patient. The treatment will reduce activity to very low levels within approximately 2-4 weeks, leading to elimination.

What You Can Expect From The Treatment

Your Technician will be using residual sprays and or aerosol insecticides that are strategically placed at sites of insect activity. Moth traps may also be used for monitoring of activity. All treatments will be made with your safety in mind to ensure your health.
