

# JM Pest Solutions

Your Local Pest and Rodent Expert

## Millipede Treatment

### CLIENT PREPARATION FORM

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete all the necessary preparations listed below. The following steps will ensure that your Technician is able to provide an effective and safe treatment.

## How To Prepare For The Service

### BASEMENT & GROUND FLOOR (if this is the area of concern)

- ▶ Move all furniture 12" (30 cm) away from the walls (Please be sure to exercise safety first and do not attempt to move very large furniture)
- ▶ Clear all closet floors and shelves of shoes and other items. Clothing on hangers may be left in place.

### EXTERIOR OF THE HOME

- ▶ Move all planters, patio furniture, etc 12" (30 cm) away from the walls (Please be sure to exercise safety first and do not attempt to move very large furniture)
- ▶ Remove items and debris from moist dark areas such as porches, in window wells, around rock gardens etc. to allow access for the Technician.

---

## After The Treatment

---

- ▶ **DO NOT** use other pest control chemicals (powders or sprays) or cleaning products anywhere near spray treatment, as this will decrease or eliminate their effectiveness.
- ▶ Eliminate the leaf litter from the exterior perimeter.
- ▶ Vacuum appropriately.
- ▶ Reduce humidity in the home.

---

## Reminder

---

- ▶ When a spray is applied inside your residence, you and your pets may be required to vacate the premises. Typically, a 2-hour window is sufficient. However, your representative will advise you at the time of service or leave an information notice at your premises if additional time is required.
- ▶ Persons with underlying health conditions should consult their family physician if they are concerned about re-entry time.
- ▶ Fish aquariums may be left on-site. However, they should be covered, and air filters disconnected.
- ▶ Please be patient. The treatment will reduce activity to very low levels within approximately 2-4 weeks, leading to elimination.

---

## What You Can Expect From The Treatment

---

Your Technician will use a variety of methods to control the pest depending on each unique situation. Liquid spray will be used and is the most effective treatment

to take control. All treatments will be made with your safety in mind to ensure your health.

---
